Zaniac18 & hogsett7: Cousins for Young + Robinson

Zaniac18 receives Kirk Cousins; hogsett7 receives Bryce Young and Wan'Dale Robinson. Accepted Nov 10, 2026 and shown on Sleeper.

VERDICT: LEANS HOGSETT7. Imbalance ratio **1.38x** in hogsett7's favor, inside the **notable** band (1.3x to 1.75x). Fair-trade confidence: about **55%**. Collusion risk: **low**, since it is a normal QB-for-depth swap that a quarterback-heavy team might make for bye-week or injury reasons I can't see. Zaniac18 sends out two players and gets back one QB that ranks almost the same as the QB it gives up, so the extra value in the deal is the WR.

Player	Latest news	ROS	Wt	Sec	Value
K. Cousins QB - MIN to Zaniac18	Rest-of-season QB15 at FootballGuys (Week 10 update, up 3). Minnesota traded for him at the deadline; FootballGuys says that doesn't change his outlook much. Sat on hogsett7's bench in Week 8 (28.18).	58	0.9	0.90	**34.0**
B. Young QB - CAR to hogsett7	Rest-of-season QB16 at FootballGuys (down 2). Ranked one spot behind Cousins, so the QB swap is close to like for like.	61	0.9	0.85	**29.8**
W. Robinson WR - TEN to hogsett7	35 catches, 262 yards, 3 TD this season (RotoWire). Caught 6 of 7 targets for 57 yards and a TD on Nov 1, with a lost fumble. Rookie C. Tate's shoulder injury has given him a bigger role; Titans are 1-7 and were on bye in Week 9.	80	1.0	0.85	**17.0**

Totals: Zaniac18 receives 34.0 (Cousins). hogsett7 receives 46.8 (Young 29.8, Robinson 17.0). Imbalance 1.38x.

Formula: Player Value = Scarcity Weight x (100 - ROS Rank) x Role Security (RB 1.4, WR 1.0, QB 0.9, TE 1.1). Imbalance ratio = higher side / lower side. Bands: 1.3x or less is fair, 1.3x to 1.75x notable, 1.75x to 2.5x ask for a rationale, over 2.5x severe. **The ROS ranks and security scores are my estimates.** FootballGuys lists Cousins and Young by position rank (QB15, QB16); I converted those to rough overall ranks (about 58 and 61) and I put Robinson near WR40, or about 80 overall, because I couldn't read his published rank. Role security: Cousins 0.90, Young 0.85, Robinson 0.85. This is a model, not a verdict, and I don't know either team's full roster or bye weeks.

Stress test: Robinson's rank and the Young/Cousins gap

Assumption	Zaniac18 gets	hogsett7 gets	Ratio
Base case (Robinson 80, Cousins 58, Young 61)	34.0	46.8	1.38x hogsett7
Robinson as a flex WR (rank 65)	34.0	59.6	1.75x hogsett7
Robinson near the fringe (rank 95)	34.0	34.1	1.00x hogsett7
Cousins clearly better (rank 50), Robinson 80	40.5	46.8	1.16x hogsett7
Young clearly better (Cousins 65, Young 55), Robinson 80	28.4	51.4	1.81x hogsett7

hogsett7 is ahead in every case, from even (Robinson at rank 95, 1.00x) up to 1.81x (if Young ranks well ahead of Cousins). It only flips to Zaniac18 if Cousins ranks around 40 overall, well above Young.

Why it leans hogsett7

• **Two for one.** hogsett7 gets a QB who ranks about the same as the one it sends out, plus a WR with a growing role. The WR is the piece Zaniac18 pays extra for.

• **Depth versus need.** Zaniac18 started P. Mahomes at QB in Week 9 (16.48), and hogsett7 started D. Maye (21.26). If both teams use one starting QB, this trade only moves backups and streamers, and Cousins and Young are close in value. That makes the extra player (Robinson) the real transaction. I'm assuming one QB slot, since the printed pages show one QB starter row per team.

• **What helps Zaniac18.** Zaniac18 went 3-6 and lost three straight, with 100.28 in Week 9. A lateral QB move that also costs a WR could still be defensible if Cousins fits its bye weeks or matchups better than Young, but I can't see that from the pages I have.

If you wanted to push on it

For Zaniac18: the clean fix would have been Cousins for Young straight up, or Cousins plus a low-end piece for Young and Robinson. The gap is about 13 value points on this model. **For hogsett7:** nothing to fix on its side. **Collusion check:** low. The ratio is well inside the band where a trade is a judgment call, not an alarm, and the players are ordinary depth pieces.
