

One Bite Fantasy League — Trade Review: Zaniac18 & satiro

Full PPR · Value analysis, not a ruling · Corrected for trade direction

The Trade

	Zaniac18 sends	satiro sends
Player	Ollie Gordon II (RB, MIA)	Wan'Dale Robinson (WR, TEN)
FAAB	—	\$45

Zaniac18 sends Gordon only and receives Robinson **plus** \$45 FAAB. Also relevant: Zaniac18 had just spent \$65 FAAB on waivers to acquire Gordon in the first place — so across both moves, Zaniac18 put up \$65, got \$45 back, and ended up holding Robinson instead of Gordon. Post-trade FAAB: Zaniac18 \$45, satiro \$54.

Context

Achane (MIA's starting RB) tore his ACL and is out for the season (confirmed Sept. 28) — Gordon became an instant top waiver target (RB2/3 outlook, up from deep-bench RB79), which is exactly why Zaniac18 paid \$65 to win that waiver claim. Gordon's role still carries committee risk (Wright, Hunter, Washington). Robinson is a real but crowded slot WR on a \$78M deal; 6 rec/47 yd through 2 games. 2026 has also been a documented bad year for RB injuries league-wide (Jacobs, Pacheco, Sampson, Davis, Coleman all on IR/exempt), making volume-RB touches genuinely scarce — which is what both the waiver price and this trade reflect.

The Formula

Player Value = Scarcity Weight × (100 – Rest-of-Season Rank) × Role Security | FAAB Value = \$ × 0.5 | Imbalance Ratio = higher total ÷ lower total

≤1.3× Fair	1.3–1.75× Notable gap	1.75–2.5× Ask for rationale	>2.5× Severe, review
------------	-----------------------	-----------------------------	----------------------

Applied

	Gordon (RB)	Robinson (WR)
Scarcity	1.4 (elevated — 2026 RB injury wave)	1.0
ROS Rank (est.)	~25	~40
Role Security	0.8 (committee risk)	0.9 (crowded but real role)
Value	1.4×(100–25)×0.8 = 84.0	1.0×(100–40)×0.9 = 54.0
Zaniac18 sends	Gordon = 84.0	
Zaniac18 receives	Robinson + \$45×0.5 = 54.0 + 22.5 = 76.5	

Imbalance Ratio = 84.0 ÷ 76.5 = 1.10× — well within the fair-trade band.

Verdict

Confidence this was collusion: LOW. Corrected for direction, this trade is close to even by the formula — satiro gave up a real roster player (Robinson) plus \$45 FAAB to acquire the hottest waiver pickup in the league; Zaniac18 took a secure WR plus cash in exchange for a speculative RB it had just paid near-full price for on waivers (\$65) a few days earlier.

This reads as two rational, if differently-styled, teams: satiro paying a full, fair price to chase a scarce asset, and Zaniac18 cashing in a successful speculative bet rather than holding a committee-risk back. Neither side is giving away value for nothing. Nothing here suggests collusion.
